# Crystal Structure of Dimeric [4-\{(2-Oxybenzyl)imino\}-2-penten-2-olato$\left.O, O^{\prime}, N\right]$ copper(II) Complex 

Dinçer Ülkü*, Cengiz Arici*, M. Nawaz Tahir*, Orhan Atakol** ${ }^{*}$ and Mustafa Taştekin**<br>*Department of Engineering Physics, Hacettepe University, Beytepe 06532, Ankara, Turkey<br>**Department of Chemistry, Science Faculty, Ankara University, Tandogan 06100, Turkey

Due to the super exchange mechanism over the O atoms, dimeric copper(II) complexes with double oxygen bridges show subnormal magnetic moments. ${ }^{1-3}$ There seems to be correlations between the magnetic properties of the systems and the dihedral angle between the bridging plane and the coordination square around copper, as well as with the $\mathrm{Cu}-\mathrm{O}-\mathrm{Cu}$ bridging angle. As a contribution of our previous work ${ }^{4-7}$ on dimeric Cu complexes, this structure determination was performed to obtain more information about the stereochemistry around the copper atom.

The crystalline ligand 4-[(2-hydroxybenzyl)imino]-2-hydroxy-2-penten was prepared from the mixture of 2hydroxybenzylamine ( $1.23 \mathrm{~g} ; 0.01 \mathrm{~mol}$ ) and acetylacetone ( $1.0 \mathrm{~g} ; 0.01 \mathrm{~mol}$ ) in 30 ml of hot ethanol after 24 h in air. To a solution of the ligand ( $0.205 \mathrm{~g} ; 1 \mathrm{mmol}$ ) in 40 ml DMF above $130^{\circ} \mathrm{C}$, a solution of $\mathrm{Cu}\left(\mathrm{CH}_{3} \mathrm{COO}\right)_{2}$. $\mathrm{H}_{2} \mathrm{O}(0.199 \mathrm{~g} ; 1 \mathrm{mmol})$ in 20 ml hot methanol was added dropwise and the mixture was set aside. The crystals were obtained after allowing the solution to stand for 36 h at room temperature. The chemical reaction of the title compound is shown in Fig. 1.

The complex includes two $\mathrm{Cu}\left(\mathrm{C}_{12} \mathrm{H}_{13} \mathrm{NO}_{2}\right)$ structure units linked via phenolic O atoms (Fig. 2). The central CuOCuO bridging group is practically planar. The Cu and O atoms lie alternating $0.009 \AA$ above and below this least squares plane. The $\mathrm{Cu} 1-\mathrm{N} 1$ and $\mathrm{Cu} 2-\mathrm{N} 2$ bond lengths are $1.906(4)$ and $1.925(4) \AA$, respectively. The average $\mathrm{Cu}-\mathrm{O} 1$ [1.871(2) $\AA$ ] and $\mathrm{Cu}-\mathrm{O} 2$ $[1.946(9) \AA]$ bond distances could be considered equal within experimental error. The average value of the $\mathrm{Cu}-\mathrm{O}-\mathrm{Cu}$ bridging angle is $102.8(3)^{\circ}$. These values are

Fig. 1 Synthesis and chemical structure.

$B_{\mathrm{eq}}=\left(8 \pi^{2} / 3\right) \sum_{i} \sum_{j} U_{i j} a_{i}^{*} a_{j}^{*}\left(\boldsymbol{a}_{i} \cdot \boldsymbol{a}_{j}\right)$.
comparable with the corresponding values reported in the literature. ${ }^{4-7}$ The displacement of the Cu 1 and Cu 2 atoms from their coordination best planes are 0.0861(1) and $0.0378(9) \AA$ respectively. The dihedral angles between the bridging plane and the coordination planes around Cu 1 and Cu 2 are $9.9(3)^{\circ}$ and $12.6(3)^{\circ}$ respectively. The $\mathrm{Cu}-\mathrm{Cu}$ separation $[3.0478(6) \AA$ ] is comparable with the values found in the reported structures. ${ }^{47}$ Table 1 shows the crystal and experimental data, while final atomic parameters are given in Table 2. The bond distances and angles are shown in Table 3.
