(Received February 26, 2001; Accepted October 1, 2001)
$N, N^{\prime}$-Bis(salicylidene)-1,3-propanediamine ${ }^{1,2}$ and its 2-hydroxy derivative ${ }^{3-6}$ (1) have been reported to have a greater tendency to yield polynuclear complexes. This communication presents the X-ray structure of the Ni-Mn-Ni complex (2) prepared using ligand 1 (Fig. 1). The title complex was prepared in two steps. Step 1: After the ligand $(0.01 \mathrm{~mol}, 2.98 \mathrm{~g})$ was dissolved in hot $\mathrm{EtOH}(50 \mathrm{~mL})$, a solution of $\mathrm{NiCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O}(0.01 \mathrm{~mol}, 2.37 \mathrm{~g})$ in hot water $(30 \mathrm{~mL})$ and ammonia ( 10 mL ) was then added. The resulting solution was thoroughly mixed and set aside for 2 h . The precipitated crystals were filtered and dried at 363 K . Step 2: Filtered crystals were dissolved in hot DMF and mixed with a hot $\mathrm{MeOH}(20 \mathrm{~mL})$ solution of $\mathrm{Mn}(\mathrm{AcO})_{2} \cdot 4 \mathrm{H}_{2} \mathrm{O}(0.0005 \mathrm{~mol}$, $0.123 \mathrm{~g})$. The resulting solution was set aside for 24 h . The precipitated crystals were filtered, dried in air and used for Xray data collection with graphite-monochromatized $\operatorname{Mo} \mathrm{K}_{\alpha}(\lambda=$
$0.71093 \AA$ ) radiation. The crystal and experimental data are presented in Table 1 and an ORTEP ${ }^{7}$ plot of the titled complex is shown in Fig. 2. Table 2 gives the final atomic coordinates, while the bond distances and angles are given in Table 3.
Each Ni atom is coordinated by 4 oxygen and 2 nitrogen atoms. The Mn atom is located on a center of inversion, and is coordinated by 6 oxygen atoms. The distance $\mathrm{Ni}-\mathrm{Mn}$ is $3.1299(6) \AA$ and the $\mathrm{Ni}-\mathrm{Mn}-\mathrm{Ni}$ bond angle is $180^{\circ}$. The methylene-bonded OH group was expected to form intermolecular interactions, but instead formed intramolecular H-bonding to the $\mathrm{O}(1)$ atom of the coordinated dimethylformamide group, such that the O6-H6‥O1: O6-H6 distance is $1.11(4) \AA$; the H6 $\cdots \mathrm{O} 1$ distance is $1.87(4) \AA$ and the O6-H6 $\cdots \mathrm{O} 1$ angle is $175(4)^{\circ}$.
